

Refractory. Intractable. Drug-resistant.

If you've heard these terms to describe the seizures, it could be a sign of something more. Start the conversation that may lead to a more specific diagnosis.

Seizures Are Signs

Don't wait to get the answers you're looking for. Take the assessment today at SeizuresAreSigns.com

After completing, you will receive:

- A customized response summary to share with your doctor
- Key questions to ask your doctor during your appointment
- A summary of why each question matters

Take the quick assessment at
SeizuresAreSigns.com

It may take up to 5 years of uncontrolled seizures before a proper diagnosis is made.

You shouldn't have to wait that long.

Not knowing your specific diagnosis could mean years of searching for answers, but a specific diagnosis could mean all the difference—it can open a door to treatment options, access to foundations and grants or financial assistance, connect you with a supportive community of others who can share their experience, and much more.

Lili, at age 19
Living with Lennox-Gastaut syndrome
