

Introducing the

NillyNoggin® EEG Cap!

Colorful - Fun - Functional

Designed for children to wear while receiving an ambulatory or prolonged EEG. Created by a mom who has a daughter suffering from severe epilepsy.

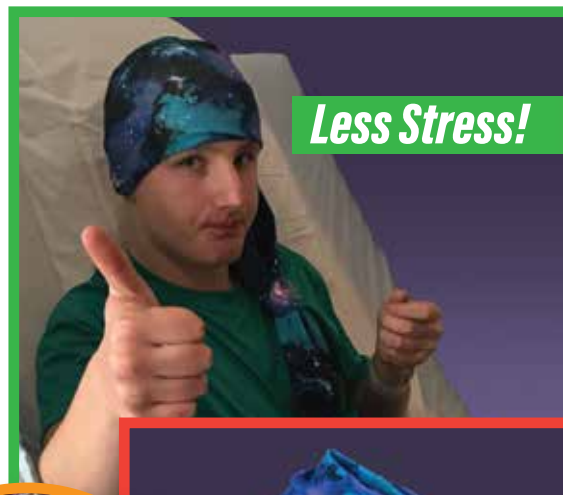

- Aids functionality for EEG technicians to access leads
- Helps protect leads from wandering hands
- Offers choice of a fun, colorful cap to coverup the “scary”
- Comfortable, breathable, cool and snug
- Also great to wear during sleep studies!

We often hear from parents and children with epilepsy that EEG procedures are traumatic.

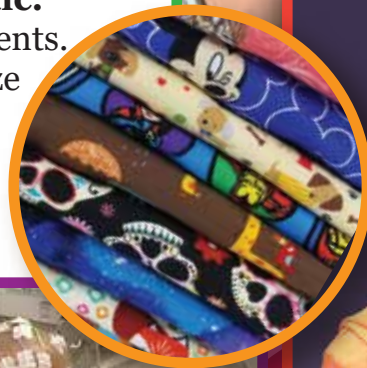

Hospital rooms can be sterile, medical environments. The procedure is also very sterile with white gauze and white tape. It can be very scary!

Children with epilepsy deserve a colorful, comfy, fun product! To take them to a “happy” place in spite of the seriousness of their illness and the EEG treatment.

Help us make sure each child that requires an EEG has an opportunity to receive a NillyNoggin® EEG Cap!

Less Stress!

Happy Kiddos!

Smiles Not Frowns!
