

about

biohaven

biohaven

Biohaven is a clinical-stage patient focused pharmaceutical company. The needs of individuals like you (or yours) inspire us to overcome obstacles that stand in the way of medical progress.

We are led by our inspiring CEO Dr. Vlad Coric and based in New Haven, CT, with offices throughout the US and in Ireland.

Are you living with Epilepsy?

If you are diagnosed with certain types of epilepsy, our clinical trials may be able to help.

rise

shine

We are studying an investigational drug to add to your current epilepsy therapies to help treat your seizures.

There is no cost to you to participate and insurance is not required.

Learn more about the benefits of joining our clinical trials and see if you qualify today!

biohaven

Who is the RISE study for?

- Women and men between the ages of 18 and 75 (adolescents aged 12 to 17 may be able to join at a later time)
- Have been diagnosed with **Focal Onset Epilepsy** at least 1 year ago
- Are currently taking 1 to 3 anti-seizure medications

Participants Receive at No Cost:

- The study drug or placebo
- All study-related care, testing and monitoring of your health
- Continuous access to medical professionals who can answer your questions

Coverage of travel expenses and compensation for participation may be provided.

Health Insurance is **not** required for participation

* A placebo is a pill that has no active properties.

We will RISE together
biohaven

What to Expect

1 Clinic Visit One: Screen for Eligibility

You will be asked to sign a consent form granting your permission for the study team to ask questions and perform the screening tests and assessments to see if you qualify for the study.

You will be asked to keep a diary of the kinds of seizures you are having.

If you qualify for the study, you will be seen in the clinic again for 5 or 6 more visits over a period of about 2 ½ to 3 ½ months.

2 Clinic Visit Two: Start Your Journey

This is when you receive your study drug or placebo and instructions about how and when to take it.

2/3 of the participants will receive BHV-7000 and 1/3 of the participants will receive a placebo.* It is important because it will help us to see if BHV-7000 has an impact on the type of seizures we are studying.

Next Clinic Visits

Your study doctor will run some tests and talk with you about your progress and well-being. You will be asked to complete some questionnaires about how you are feeling.

When your participation in one of these studies is complete, you may be able to enter another study where all participants will receive the study drug, BHV-7000.

At Biohaven, it is extremely important to us that you are supported every step of the trial.

You will have access to medical professionals who will enhance the team that already manages your care.

Your well-being is our absolute priority. Participation is completely voluntary, and you may stop at any time.

Coming soon!

Biohaven is also planning a study for participants who are living with Generalized Epilepsy.

Please continue to check our website for updated information on this trial.
