

EpiWatch®

Seizure Detection and Alerting on Apple Watch

Transforming Epilepsy Care with
Continuous Seizure Monitoring CSM™

EpiWatch's Continuous Seizure Monitor (CSM)TM

Uses an app-based algorithm to detect and alert for seizure activity

Runs on Apple Watch

Accurately, discreetly, and passively monitors and alerts caregivers of tonic-clonic seizure activity

Evolved from a long-term research relationship with Apple, Johns Hopkins University, EpiWatch

US FDA 510(k) Clearance pending

EpiWatch Monitoring Provides Integrated, Person-Centered Security and Care That Empowers Individuals with Epilepsy

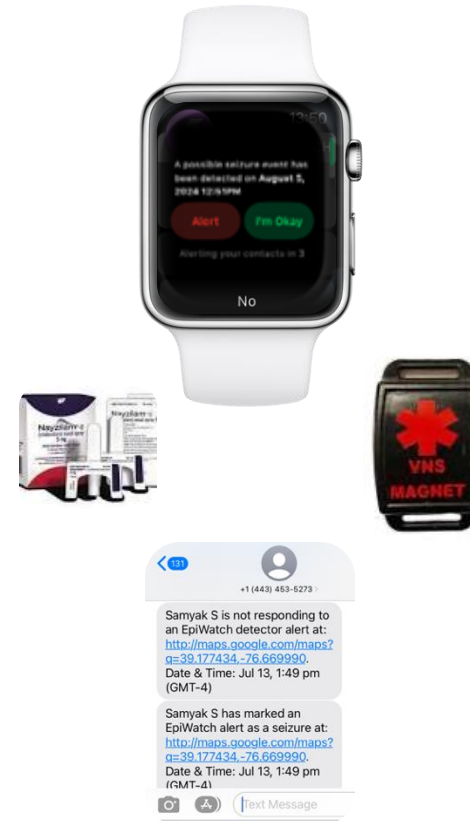

Core Capabilities

CSM™ provides integrated, objective tonic-clonic seizure detection, alerting and logging on an accessible, easy-to-use, and consumer-friendly Apple Watch Platform

Alert

EpiWatch alerts caregiver(s) to take immediate, potentially life-saving action

Result - Effective Action

EpiWatch detection and rapid alerting creates the opportunity for:

- On-demand (rescue) Therapy delivery
- Seizure Action Plan actions

While providing Continuous Seizure Monitoring
