

EPIWATCH Advantage

- FDA-cleared device, with robust clinical trials to validate seizure detection.
- High detection sensitivity
- Low false alarm rate
- The first and only FDA cleared Apple Watch app for epilepsy
- Discreet appearance and comfortable to wear
- Use of a seizure detection device may reduce the risk of SUDEP

RESOURCES

Education & Financial Assistance

WHY CONTINUOUS Monitoring Matters

EpiWatch provides real-time seizure detection, alerts and seizure data capture:

- Enables Proactive Seizure Management
- Early and accurate detection and intervention is critical – especially for tonic-clonic seizures
- Can help reduce significant costs of seizure event escalation including medical transport, ED visits and hospitalizations
- Can help reduce the risk of SUDEP

The impact extends beyond seizure safety:

The unpredictability of seizures and potential for injury or death results in immeasurable caregiver and family anxiety.

EpiWatch is indicated for use with individuals ages 5 and up diagnosed with tonic-clonic seizures

EpiWatch® Continuous Seizure Monitor™

NOVEL SOLUTION to a Serious Concern

Complications from tonic-clonic seizures (TCS) are a significant health problem. Sudden Death from Epilepsy (SUDEP) risk can be reduced by prompt intervention by a caregiver, loved one, or parent – but first, they must know a seizure is occurring. With EpiWatch, **continuous monitoring for seizures** is comfortable, convenient, and compatible with everyday life.

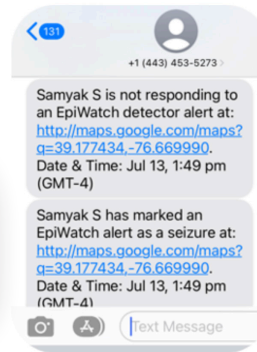

DETECT

Accurate tonic-clonic seizure detection on easy-to-use Apple Watch App

ALERT

Alerts wearers and caregiver(s) to take immediate, potentially life-saving actions

ACT

Seizure detection and rapid alerting creates the opportunity for:

- On-demand (rescue) therapy delivery
- Seizure Action Plan execution
